# BI and Executive Dashboard Development and Analysis

Solution Tool

# **Solution Overview**

### Architecture

Microsoft SQL Server Microsoft Analysis Services Oracle Business Objects Teradata MySQL

#### Infrastructure Resources

Microsoft Windows XP or Windows 2000 512 MB Ram recommended 1 Ghz processor recommended

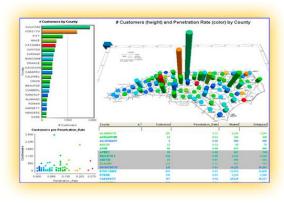

## Source

www.encoreconsulting.com| www.advizorsolutions.com ADVIZOR enterprise products free both business managers and IT folks from the headaches of traditional business intelligence platforms.

Share the power of your desktop dashboards over the web with ADVIZOR Server. ADVIZOR Server enables interactive business analysis for your enterprise and extranet users via their browser - there is no client software to install and manage. Better yet, unlike other business intelligence products, there is no complex analytical platform or framework for your IT department to cobble together before you can be productive across your enterprise. And, if you have already invested in a platform, no worries, ADVIZOR will compliment your investment and bring the data buried in layers of reporting modules and hierarchies to life.

ADVIZOR Server is installed simply in minutes. It is a breeze to publish your desktop dashboards to the ADVIZOR Server with a few clicks of your mouse enabling centralized data protection and control of your dashboards across your enterprise. Your enterprise and extranet users will enjoy the experience of being able to ask their next question without requesting yet another report -- and all they need is their mouse!
